

WASHINGTON STATE BEACH PROGRAM

Marine Recreational Beaches and Sewage Outfall Locations

RECREATIONAL BEACH MONITORING PERIOD		STP'S AND CSO'S	
○	MONITORED IN 2003 AND 2004	▲	COMBINED SEWAGE OVERFLOW (CSO)
●	MONITORED IN 2003 ONLY	▲	SEWAGE TREATMENT PLANT (STP)
●	MONITORED IN 2004 ONLY	▲	> 1 MILLION GALLON PER DAY
●	NOT YET MONITORED	▲	>100 MILLION GALLON PER DAY
□		WATERSHED RESOURCE INVENTORY AREAS (WRIA) BOUNDARIES	
□		DEPARTMENT OF ECOLOGY ADMINISTRATIVE REGIONS	

This map illustrates the location of most marine recreational beaches in Washington State and the years these beaches have been monitored by the Washington State BEACH (Beach, Environmental Assessment, Communication, and Health) Program. The BEACH Program is a cooperative effort by several state agencies, all 13 marine Counties, Tribal governments, Non-Profit organizations, and volunteers. Also illustrated are WRIA boundaries, Dept. of Ecology regional administrative boundaries, and the location of potential fecal contamination sites (combined sewage outfalls (CSO's) and sewage treatment plants. The locations of these outfalls are a work in progress and some of this data may be inaccurate.
